Continuation of Disposition of Claims: Claims pending in the application are 2,39,42,45,48,51,54,57,60,63,66,69,72,75,78,81,84,87,90,93,96,99 and 102.

DETAILED ACTIONS

Receipt of applicants' amendments and remarks submitted May 9, 2003 is acknowledged.

Claim Objections

1. Claims 78, 81, 84, 87, 90, 93, and 96 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections 35 U.S.C. 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 2, 39, 42, 45, 48, 51, 54, 57, 60, 63, 66, 69, 72, 75, 99 and 102 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for those compounds employed in the allowable claims, does not reasonably provide enablement for any other compounds termed as "estrogen receptor modulators". The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The claimed method are drawn to a method of treating or reducing the risk of acquiring hypercholesterolemia employing a combination of a sex steroid precursor and an estrogen receptor modulator, wherein the combination provides a synergistic effect. Specifically, the claims are not enabled for the synergistic effect. The "estrogen receptor modulators" encompass various compounds structurally distinct from EM-800. The specification or the claims provide no evidence showing that compounds other than those closely related to EM-800 would provide synergistic effect

Art Unit: 1617

when combined with the estrogen receptor precursors. The pharmaceutical art is unpredictable, synergistic effect in particular, requiring each embodiment to be individually assessed of physiological activity. The instant claims read on various structurally distinct compounds, but lack any support of the synergistic effect for such compounds.
